```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Novel isolated G-protein coupled receptor peptide useful for treating disorder characterised by absence of, in appropriate or unwanted expression of the receptor protein, and as immunogens to raise antibodies

Claim 23; Fig 3; 64pp; English.

The present specifically claimed human genomic DNA sequence (located on CC chromosome 13) encodes a purinergic-related G-protein coupled receptor CC (GPCR) of the invention. GPCRs constitute a major class of proteins CC responsible for signal transduction within a cell. Upon binding of a CC ligand to the extracellular portion of a GPCR, a signal is transduced resulting in a biological or physiological change within the cell. The CC purinergic GPCRs (e.g. the P2Y receptors) - P2Y receptors are CC characterised by their selective responsiveness towards ATP and its CC analogues, some also respond to UTP. The invention comprises a human CC protein coupled receptor protein and encoding nucleic acids. The GPCR protein and nucleic acids of the invention are useful in the treatment of a disease or condition mediated by a human protease. The GPCR protein of the gpcreation for the development/identification of the arctivity of the GPCR, or the interaction of the GPCR and a molecule with which it normally interacts; and treating a disorder characterised by an absence of, or inappropriate expression of the GPCR protein. The GPCR nucleic acids of the invention are useful in diagnostic assays to controlling GPCR expression; and in gene therapy to treat patients with aberrant GPCR gene expression. The GPCR nucleic acids can also be used in the production of transgenic animals.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid molecule (I) compa nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:
(a) assessing whether a patient is affilicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;
                                                                                                                                                                                                                                                                                                                      361
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;
(e) selecting a composition for inhibiting prostate cancer in a patient;
(f) assessing the prostate cell carcinogenic potential of a compound;
(g) determining whether prostate cancer has metastasized in a patient,
(h) assessing the aggressiveness or indolence of prostate cancer in a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1020
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     960
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       900
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     780
```

The invention relates to an isolated nucleic acid molecule (I) a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) o

) comprising of the

Claim 1; Page 6487-6488;

11750pp; English

Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer -

WPI;

2001-662795/76.

Novel human P2Y1-like G protein-coupled receptor polypeptide which can be regulated for treating infection, pain, cancer, diabetes, anorexia, asthma, hypertension, neurological disorder and dyskinesia can

Claim 1; Fig 5; 118pp; English.

CC receptor (GPCR) polypeptide and the nucleic acids encounty in (including 5 and 3 sequences, promoters, fragments, variants, or a CC sequence encoding a protein at least 50% identical to the GPCR). CC Also included are an expression vector comprising the nucleic acid, a host cell containing the vector and the identification of modulators of the GPCR especially those that reduce the activity of the GPCR. CC The nucleic acid is useful for detecting a polynucleotide encoding the GPCR in a biological sample. The GPCR and nucleic acid are useful for for modulators of the GPCR. The modulator or agent useful for modulators of the GPCR. The modulator or agent useful for modulators of the GPCR. The modulator or agent useful for modulators of the GPCR. The modulator or agent useful for modulating cc the activity of P2Y1-like G protein-coupled receptor in a disease such as anorexia, bulimia, asthma, central nervous system (CNS) disease, acute heart failure, hypotension, hypertension, urinary retention, cancer, osteoporosis, diabettes, angina pectoris, mycardial infarction, ulcer, osteoporosis, diabettes, angina pectoris, benign prostatic hypertrophy, cc psychotic and neurological disorders, dyskinesias, HIV virus infection of Alsease, anxiety, schizophrenia, manic depression, delirium, dementia, ABKIL1381

AD AB The invention relates to a purified human P2Y1-like G protein-coupled receptor (GPCR) polypeptide and the nucleic acids encoding it

New G-protein coupled receptor (GPCR) polypeptide with homology to P2Y purinoreceptor, useful for treating e.g. inflammation or cancers in a patient, or for screening GPCR agonists or antagonists for treating diseases

WPI; 2002-521945/56. P-PSDB; ABB81902.

Claim 1; Page 12; 19pp; English

The invention relates to a novel G-protein coupled receptor (GPCR), and the polynucleotide encoding it. The protein of the invention has neuroprotective, anti-inflammatory, cytostatic, cardiovascular, antiallergic, hypotensive, antiarteriosclerotic, and osteopathic activity. The GPCR polypeptide is useful for manufacturing a medicament for treating a patient who needs to upregulate a receptor. Preferably, therapeutically useful areas are hypertension, asthma, and artherosclerosis. The sequence encodes the G-protein coupled receptor of the invention, pFI-019.

                                                                                                                                                                                                                                      The invention relates to human G-protein coupled receptor (GCREC) polypeptides and polynucleotides. GCREC polypeptides are useful for screening compounds that modulate their activity. They are useful in the diagnosis, prevention and treatment of disorders which include cell proliferative disorders such as arteriosclerosis, hepatitis, myelofibrosis, psoriasis and cancer including adenocarcinoma, leuka

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       s: plasmid ends
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 USA
                adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gli4732114 [gb]AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XiIO-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                           (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Biomedical
